Field Tracker

Streamlined Management
Software

What Is Field Tracker?

Field Tracker is a powerful and invaluable tool for virtually any industry where equipment maintenance and safety procedures are performed. It is composed of:

Field Tracker Mobile

A mobile application that allows users to view and submit procedures online.

Field Tracker Manager

A powerful desktop application that allows supervisors to manage and create report data collected with Field Tracker Mobile.
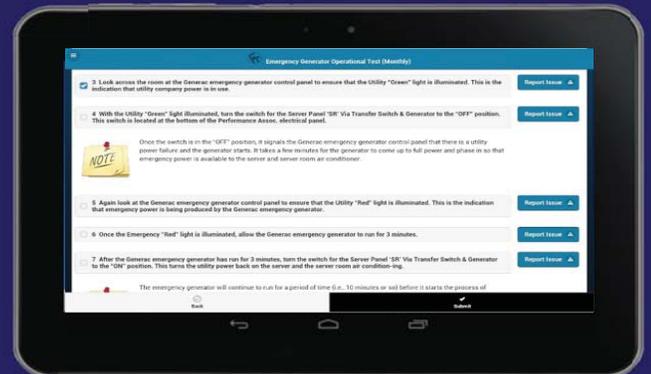

Field Tracker Mobile

Evaluate Trainees

Measurable tasks for operators can be created in Field Tracker Manager or synchronized with data in PTracker Pro. Trainers can then use Field Tracker Mobile to evaluate their operators in the field and submit completion dates for each task.

View/Submit Procedures

Procedures such as preventive maintenance tasks and preoperational, start-up, shutdown, and routine inspections are launched by the operator, who performs all steps and verifies completion of each directly on the mobile device.

Report Issues

If problems are found, operators can quickly report issues using a dropdown selection of components and faults that pertain to the specific step, limiting the chance for errors. They can also attach photos and videos taken directly with the device as well as provide their own comments.
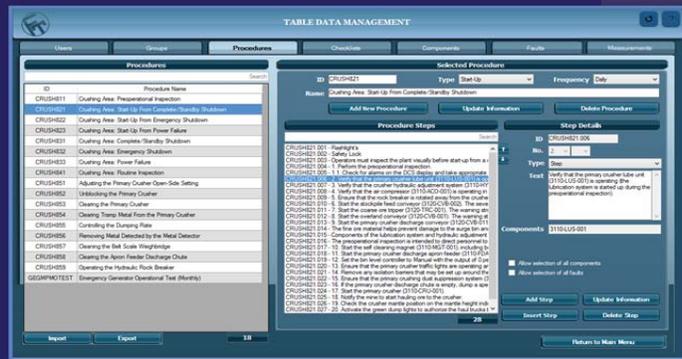

Each issue is given a priority, and those marked as high priority automatically trigger an e-mail sent to the assigned supervisor so that they can be resolved quickly instead of sitting idly in a stack of papers.

Field Tracker Manager

Data Management

View, edit, import, and export data that appears in Field Tracker Mobile, including user information, checklist tasks, and procedures. Create groups to associate data items with each other and assign supervisors. For each procedure step, specify the components, faults, and measurements for operators to indicate, or simply allow them to select from all available items in the database.
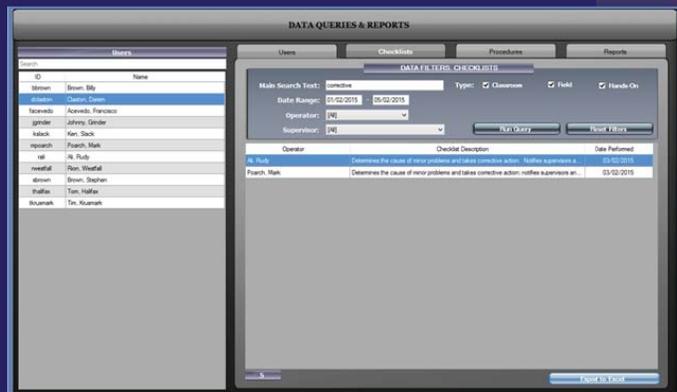

Supervisor Dashboard

This window gives supervisors an at-a-glance overview of all submitted procedures. They can apply display filters, view reported issues, photos, videos, and other submitted information and approve or reject items.

Data Queries and Results

Perform research and create filtered reports using any data in the system, be it for a specific operator, group of users under a given supervisor, or all users.

When interfaced with Performance Manager, our robust CMMS application (provided separately), this data can be seamlessly integrated into requests for proposals and work orders.

Installation, Training, and Support

Installation and Training

PAI can perform the entire installation and configuration of Field Tracker as well as give on-site training sessions for your users, trainers, and/or supervisors. Our trained maintenance specialists will walk you through every step of the process to ensure optimal implementation of Field Tracker at your facility.

Support and Updates

Full technical support for Field Tracker is offered via e-mail, web session, phone or conference call, or on-site visits as needed. We proactively release upgrades to Field Tracker, but we can also work with you on specific application improvements to customize the program to the growing needs of your operation.

Hardware and Security

Don't have mobile devices for your operators? No problem. We can provide as many tablets as you need with Field Tracker Mobile preinstalled and, if desired, maximum security settings to prevent usage of other applications on the devices. Each tablet is equipped with heavy-duty protective exteriors to hold up in even the most rugged conditions.

Are you ready to take your operation to the next level? Don't wait another moment; contact us for a free demo of Field Tracker today!

System Requirements

Field Tracker Mobile

Android or Windows tablet
2 GB of RAM
16 GB of hard drive storage

Field Tracker Manager

Windows 7 or greater
2 GB of RAM
40 GB of hard drive storage
Adobe Acrobat for help documentation
Microsoft Word and Excel for creating reports
